WELCOME ADDRESS

Dear colleagues

We would like to welcome you to the **4th Thessaloniki Vitreo-Retinal Summer School**.

Once again, this year's educational program is a cooperative result of leading authorities and prominent worldwide Institutions on the surgical and medical retina fields.

TVRS is a combined effort of the prominent Professors Bandello from San Raffaele University in Milan and Zografos from Jules-Gonin Eye Clinic in Lausanne along with the local organizers, the faculty of the Papanikolaou Hospital.

The School is also a project of the South–Eastern Ophthalmological Society and under the auspices of the Northern Greece Ophthalmological Society.

This years wet labs include:

- Vitrectomy using only 23-25-27g MIVS
- Wide angle observation systems EIBOS –BIOM.
- Office based Vitrectomy set up.
- New machines and instruments presented by the industry.
- Cost effectiveness in Vitrectomy
- 3D videos from live Retina surgery
- Dry Labs in Medical Retina from J. Datseris
- Wet labs, Cataract Surgeons courses, in Facing Cataract Complications from the side ports, using MIVS instrumentation for the anterior chamber, are some of the titles which will be addressed.

We grow and evolve inspired by our mentor Dr G. Guarnaccia and by the feedback received from our previous participants.

This year TVRS evolves to an advanced course to keep up with the growing demand of technical questions and problems, that our young fellows are facing alone. The curriculum vitae of this year's participants indicated that very soon, they will become instructors of our school.

Higher intensity and longer wet-lab practice will not prevail the amiable and friendly atmosphere of our previous summer schools.

We will all be together every day both during lunch breaks and dinner time, to maintain our TVRS spirit.

Thank you for joining us.

Presentations will be supported by Power Point and should be handed to the Technical Secretariat of the School at least 1 hour prior to the session.

Wet Labs operated by MTS :

There will be 8-10 microscopes and vitrectomy machines using wide angle EIBOS non-contact observation systems and others performing only 23G and 25G MIVS vitrectomy.

Topics:

- Getting in the position to see the fundus trocal placement.
- Vitreous hemorrhage vitrectomy
- Lensectomy – treating lense complications for the cataract surgeon – use of the side ports and the infusion as a maintainer.
- Foreign body removal
- Primary vitrectomy in retina detachment
- Fluid air exchange
- Perfluorocarbon
- Silicon oil injections
- How to inject medicines into the eye etc

Dry Labs:

Vitrectomy and ILM removal from artificial eyes using 23G and 25G special forceps.

Medical Retina Labs:

Practice on Spectralis and UBM paradigm P60

- Fluroscein and simultaneous OCT and ICG

UBM Paradigm P60 “dry” detection technique in anterior chamber pathology
